# Introduction

# Rules

## Skillchecks

To determine whether someone succeeds or fails at a specific task, this ruleset uses a d100 or d% system. That means you throw a 100 sided die (a so called "d100") and try to roll a lower or equal number to your skill level to succeed, if you roll a higher number you fail.

Since there aren't many d100 around, it is recommended that you roll two 10 sided dice (d10) and declare one as the tens and the other as the ones (before you throw them, of course).

## Attribute check

Sometimes you have to check for an attribute directly. In this case you multiply the corresponding attribute by ten and roll a d100<sup>1</sup>. Again, the check succeeds if you roll lower or equal to the value and fails if you roll

higher.

## Critical successes and failures

Whenever you roll under or equal to a  $\frac{1}{10}$  of your original target number, you score a critical success. Critical successes give your weapons more damage, your containers more and more valuable loot and gives you extra options during dialogues, simply put, it makes your success even more better.

In contrary, whenever you roll higher than  $89 + \text{the LUCK of the character you are rolling for}$ , it is a critical failure. A critical failure will not only have grave consequences but also prevent any further attempt to succeed in the same matter, e.g. a lock or your gun will jam, a terminal locks down and alarms are sounded.

---

<sup>1</sup>You could just roll a d10 against the attribute directly but there are some events and perks that will modify your roll by numbers not multiple to 10

## Modifiers

Sometimes, you find yourself at a task that is either easier or more difficult than what has been encountered on average, for example picking a state-of-the-art lock or persuading a very naive trader to give you a discount or tell you a secret. In these cases the GM may modify a roll to better fit the situation, he will tell you to either add or subtract a certain number to your roll. If, with your added modifiers, you still roll under, equal or above your target number, you succeed or fail at your task as usual.

To ease a task you subtract and to complicate it you add appropriate modifiers.
